

## Bill Gates And Google Use Violent Sex Attraction To Kill Opposition Buzzers

[SUMMER BUMMER: New mosquito-borne virus jumps from animals to humans...](#)

[Bill Gates engineered mosquitos kill each other using SEX...](#)

Hugh Pickens writes writes

"The Atlantic reports that experts in genetics and microbiology are convinced we may be only a few years away from the development of advanced, genetic bio-weapons able to target a single human being based on their DNA. The authors paint a scenario of the development of a virus that causes only mild flu in the general population but when the virus crosses paths with cells containing a very specific DNA sequence, the sequence would act as a molecular key to unlock secondary functions that would trigger a fast-acting neuro-destructive disease that produces memory loss and, eventually, death. The requisite equipment including gene sequencers, micro-array scanners, and mass spectrometers now cost over \$1 million but on eBay, it can be had for as little as \$10,000. According to Ronald Kessler, the author of the 2009 book *In the President's Secret Service*, Navy stewards gather bedsheets, drinking glasses, and other objects the president has touched—they are later sanitized or destroyed—in an effort to keep would-be malefactors from obtaining his genetic material. However no amount of Secret Service vigilance can ever fully secure the president's DNA, because an entire genetic blueprint can now be produced from the information within just a single cell. How to protect the President? The authors propose open-sourcing

the president's genetic information to a select group of security-cleared researchers who could follow in the footsteps of the computer sciences, where 'red-team exercises,' are extremely common practices so a similar testing environment could be developed for biological war games. 'Advances in biotechnology are radically changing the scientific landscape. We are entering a world where imagination is the only brake on biology,' write the authors. 'In light of this coming synbio revolution, a wider-ranging relationship between scientists and security organizations—one defined by open exchange, continual collaboration, and crowd-sourced defenses—may prove the only way to protect the president.'"

## Google's Verily is releasing Wolbachia-carry...

The release is a field study for the Debug Project, an initiative that aims to decimate certain mosquito populations.

## Google's life sciences unit is releasing 20 ...

Verily, the life sciences arm of **Google's** parent company Alphabet, has hatched a plan to release about 20 million lab-made, bacteria-infected **mosquitoes** upon Fresno, California — and that's a good thing! You see, the Zika-carrying *Aedes aegypti* mosquito is prevalent in the area. Earlier this ...
