 WSJ: There's Mounting Evidence of 2016 Election Meddling Coming From the FBI

There is something rotten at the Federal Bureau of Investigation. I mean all of this is just absurd. We have two FBI agents texting one another, one of which is having an extramarital affair with the other, cryptically [talking about “insurance” against a Trump presidency](#). That text between these two agents was delivered on August 15, 2016. You also have Andrew Weissmann, Special Counsel Robert Mueller’s top lieutenant, voicing praise for then-acting Attorney General Sally Yates for refusing to enact President Trump’s executive order on immigration, which got her fired. Then, there’s another DOJ official, Bruce Ohr, who was demoted for meeting the authors of the infamous and unverified Trump dossier, Fusion GPS; Ohr’s wife, Nellie, [worked for that firm](#) during the 2016 election. If there is nothing rotten at the FBI, then it’s credibility is definitely in question, something that The Wall Street Journal’s editorial board mentioned in their op-ed about this mess. The two FBI agents at the center of the firestorm right now, Peter Strzok and Lisa Page are obviously no longer working with Mueller; Strzok was [removed in August](#), while Page’s assignment with the investigation has already ended and she has been transferred elsewhere. Still, from this past summer to now—and we’re just learning about these 10,000 text messages between the two. The *Journal* makes it clear that there appears to be [mounting evidence of election meddling](#) emanating from the bureau:

“I want to believe the path you threw out for consideration in Andy’s office—that there’s no way [Trump] gets elected—but I’m afraid we can’t take that risk,” Mr. Strzok wrote Ms. Page in an Aug. 15, 2016 text. He added: “It’s like an insurance policy in the unlikely event you die before you’re 40.”
