**Tech Giants Google and Facebook are currently purging conservative content from Facebook and YouTube — They are hiding conservative stories on Google — They are shadow-banning conservative news on all social media.**

In February Facebook **launched a new algorithm** to ensure that conservative news would not spread on the social media platform. The algorithm change caused President Donald Trump's engagement on Facebook posts to **plummet a whopping 45%**.

In contrast, Senators **Elizabeth Warren** (D-MA) and **Bernie Sanders** (I-VT) do not appear to have suffered a comparable decline in Facebook engagement.

Top conservative Facebook pages with daily traffic in the millions have seen 75% to 95% drop in traffic.

Young Cons, Western Journalism, SarahPalin.com, **Independent Journal Review**, Right Wing News, and *several others* have seen dramatic loss in traffic.

The Gateway Pundit does not rely on Facebook for our traffic numbers. Still, we saw a significant drop in Facebook traffic last month.

**This is criminal behavior.**

**Meanwhile, liberal sites are doing fine.**

**Google also deleted several top Conservative channels this week.**

Conservative YouTube channels were deleted in a Google purge this week.

**Google later said they “accidentally” deleted conservative channels.**

Today **Reddit The Donald** posted this letter to GOP lawmakers.

Either you stand with conservatives against Tech Giant censorship today — or you will stand alone at midterms.

**During the election conservatives fled the corrupt mainstream media and went online to get their news from trusted websites.**

*Today far left tech giants want conservative sites eliminated.*

*The left is even targeting the advertising and income of conservative websites.*

**It's time to regulate Google and Facebook!**

**Where the hell is the GOP?**
